II-1 (page 106) Shape Memory Ceramics: Status and Potential, L. Eric Cross, Pennsylvania State University, USA

II-2 (page 110) Optical Studies of Domains in Ferroelectric Actuators, K. Uchino, Maureen Mulvihill, Ki-Young Oh, Russel Brodeur, and Eric Cross, Pennsylvania State University, USA

II-3 (page 114) Antiferroelectric-Ferroelectric Phase Transformation: Opportunities for Electro-mechanical Acutation, Superelasticity and Shape Memory Effects in Electrical Ceramics, Pin Yang and David A. Payne, University of Illinois at Urbana-Champaign, USA

II-4 (page 118) Experimental Evaluation of a Phenomenological Model for the Positive Temperature Coefficient Resistance in BaTiO3-Type Ceramics, Ben Huybrechts, Masasuke Takata, and Kozo Ishizaki, Nagaoka University of Technology, Japan

II-5 (page 122) Relationship Between PTCR Effect and Oxygen Grain Boundary Diffusion in Barium Titanate Ceramics, Hajime Haneda, Junzo Tanaka, Akio Watanabe, Shun-ichi Hishita, and Shin-ichi Shirasaki, National Institute for Research In Inorganic Materials, Japan

II-6 (page 126) Classification of Electrostrictive-Based Materials for Transducers, T.R. Shrout, C.A. Randall, R.P. Brodeur, and S.J. Jang, Pennsylvania State University, USA

II-7 (page 130) Recent Development in Electrostrictive Ceramics for Low-Frequency Transducer Applications, Robert Y. Ting, U.S. Naval Research Laboratory, USA

II-8 (page 134) Manufacturing of 1-3 PZT-Polymer Composites by Injection Molding R.L. Gentilman, H.T. Pham, K.W. French, D.F. Fiore, and L.J. Bowen, Materials System Inc., USA

II-9 (page 138) Fabrication of Large Area Piezocomposites, C.M. Trottier, Fiber Materials, Inc., USA

II-10 (page 144) Two Applications for "Zero -31" Piezo-Rubber, Fred G. Geil, Westinghouse, Oceanic Division; and R.Y. Ting, U.S. Naval Research Laboratory, USA; and K. Ogura, NTK Division of NGK Spark Plug Co., Japan
II-11 (page 148) Effect of Geometry and Isolation on Vibrational Modes in 1-3 Composite Transducer Array Elements, Abraham Shurland, and T.R. Gururaja, Hewlett Packard Company, USA

II-13 (page 156) A Frequency Variable Ultrasonic Transducer Made of Composite Piezoelectric Vibrator, Moojoon Kim, Noriyoshi Chubachi, Tohoku University, Japan

II-14 (page 160) Piezoelectric Tubes for Vibration Sensing and Damping, Mark V. Parish and D. B. Chandler, CeraNova Corporation, USA

II-15 (page 164) Resistance Anomaly of Semiconducting BaTiO3 Ceramics Fired in Reducing-Reoxidizing Atmospheres, Hideji Igarashi, Shinjiro Tashiro, Atsushi Kanda, The National Defense Academy, Japan

II-16 (page 168) Stress-Biased Piezoelectric Ceramics for Actuator Applications, Gene Haertling, Clemson University, USA

II-17 (page 352) Testing Requirements and Performance Characterization of Multilayer Piezoelectric Actuators, Craig D. Near, and Timothy J. Meyer, Morgan Matroc, Inc., USA

II-18 (page 172) Preparation and Pyroelectricity of Sr0.3Ba0.7Nb2O6 Ceramics, J. Takahashi, S. Nishiwaki, and K. Kodaira, Hokkaido University, Japan

II-19 (page 176) Ferroelectric Thin Film Displacement for Atomic Force Microscope T. Fujiu, S. Watanabe, and T. Nomura, Nikon Corporation, Japan

II-20 (page 180) Cryogenic Behavior of ZnO Varistors, Lionel M. Levinson, William N. Schultz, GE Corporation Research and Development, USA
